Guitar Exercises - Section VI, Level 50

Chord transitions, common fingers, guide motion, anticipated changes, and uninterrupted progressions

80 SILENT LANDINGS | 768 ATTACKS

Level 49 established clean open-chord formation. Level 50 keeps the same shapes but compresses the time available for each change. The new priority is transition economy: planted fingers remain, guide fingers travel close to the strings, releases occur on purpose, and longer progressions continue without a reset.

1. Preserve what already works

Identify planted fingers before releasing the chord. Move only the fingers whose notes change.

2. Prepare inside the old chord

The next shape is organized during the current sustain or release window, not after the barline.

3. Keep the progression alive

A clean isolated change is not enough. Bass-string accuracy, chord quality, and pulse must survive longer routes.

Transition hierarchy

```
1. SOUND     current chord rings cleanly
2. RELEASE   remove pressure; keep contact where possible
3. ANCHOR    planted fingers remain; guide finger begins first
4. HOVER     moving fingers stay close to the strings
5. LAND      bass-side or guide destination arrives first
6. VERIFY    correct bass string, chord quality, and muted strings

TIMING WINDOWS
whole / half / quarter -> anticipation on & of 4 -> half-beat bursts -> long form
```

Notated workload

Silent landings	80
Common/pivot	64
Guide transfers	48
Release timing	64
Anticipations	80
Half-beat bursts	96
One-beat cells	96
Strum/release	64
8-bar routes	128
16-bar capstones	128
ATTACK TOTAL	**768**

Level boundary

This level increases transition speed but does not yet introduce sixteenth-note strumming or movable barre chords. If the hand loses chord quality, muting, or comfort, return to the slower window. Level 51 will build movable E-shape and A-shape barre-chord families.

SAFETY Rapid changes use brief bursts. Stop before forearm fatigue or fretting pressure increases.

Guitar Exercises - Section VI, Level 50

Transition taxonomy, chord reference, and alternate transition fingerings

READ THE MOTION PLAN BEFORE PLAYING THE GRID

PLANTED FINGER = SAME FINGER / SAME FRET; GUIDE FINGER = LEADS THE HAND TO THE NEW SHAPE

Open-chord reference

Chord	Frets low E-high e	Core fingering	Bass / attack zone
Em	0 2 2 0 0 0	O 2 3 O O O	E / all 6 strings
E	0 2 2 1 0 0	O 2 3 1 O O	E / all 6 strings
Am	x 0 2 2 1 0	x O 2 3 1 O	A / A string through high e
A	x 0 2 2 2 0	x O 2 1 3 O	A / A string through high e
Dm	x x 0 2 3 1	x x O 2 3 1	D / D string through high e
D	x x 0 2 3 2	x x O 1 3 2	D / D string through high e
C	x 3 2 0 1 0	x 3 2 O 1 O	C / A string through high e
G	3 2 0 0 0 3	2 1 O O O 3	G / all 6 strings

Transition-specific alternate fingerings

Em-alt `frets 0 2 2 0 0 0 | fingers O 1 2 O O O`

Use for G-Em and Em-C so A2 or D2 can stay planted.

E-alt `frets 0 2 2 1 0 0 | fingers O 3 2 1 O O`

Use for E-C so finger 2 stays on D2.

Motion categories

COMMON	finger remains on same string and fret
PIVOT	finger stays planted while other fingers rotate
GUIDE	finger travels first and leads the hand
TRANSFER	finger moves to another string with minimal height
RELEASE	pressure stops before the finger leaves

Bass-side landing rule

For E, Em, and G, organize the low strings before the strum. For A, Am, and C, prepare the A-string side while low E remains muted. For D and Dm, find the open D-string attack zone before the upper triangle is struck.

Guitar Exercises - Section VI, Level 50

Module A - silent transition mechanics and hover-distance control

80 SILENT LANDINGS | NO STRUM

FORM THE NEXT CHORD WITHOUT USING SOUND TO HIDE THE MOVEMENT

One silent repetition contains four counts: 1 hold the current shape; 2 release pressure while preserving anchors; 3 move the guide and remaining fingers; 4 land and inspect the new shape. Reverse the transition on the next four counts. Complete four round trips per line.

Transition	Primary mechanic	Silent count	Reps
E-Em	two planted fingers	1 hold | 2 release | 3 move | 4 land	8 landings
D-Dm	one planted finger	1 hold | 2 release | 3 move | 4 land	8 landings
C-Am	two planted fingers	1 hold | 2 release | 3 move | 4 land	8 landings
A-Am	one planted finger	1 hold | 2 release | 3 move | 4 land	8 landings
G-Em-alt	one planted finger	1 hold | 2 release | 3 move | 4 land	8 landings
Em-alt-C	one planted finger	1 hold | 2 release | 3 move | 4 land	8 landings
A-D	one planted finger	1 hold | 2 release | 3 move | 4 land	8 landings
E-A	same-string guide slide	1 hold | 2 release | 3 move | 4 land	8 landings
		1 hol	
		1 hol	

Hover-distance audit

Freeze halfway through the change. Moving fingertips should remain close enough that a piece of paper could almost touch both string and fingertip. High finger flight creates late chords.

Landing audit

After count 4, inspect finger curvature, attack zone, and unused-string muting before adding pressure. The silent shape must already be correct.

PASS Eyes open -> eyes on destination only -> eyes closed after the first chord is formed.

Module B - common, pivot, and stationary-finger transitions 1

4 PAIRS | 32 ATTACKS

KEEP THE PRINTED ANCHOR DOWN; MOVE THE OTHER FINGERS AS A SMALL GROUP

Use slow quarter notes. Each pair alternates for eight attacks. The anchor must remain relaxed; pressing harder is not the same as keeping it planted.

E <-> Em

Module C - guide-finger and bass-side transfer isolation

6 PAIRS | 48 ATTACKS

THE GUIDE FINGER MOVES FIRST; THE REST OF THE HAND FOLLOWS WITHOUT JUMPING

Play each pair for eight slow quarter-note attacks. On the first four attacks, exaggerate the guide motion while the other fingers hover. On the final four, land the complete chord as one coordinated shape.

E <-> A

Guide-finger rule

A guide finger may slide on the same string or transfer to another string. It must release enough pressure to move cleanly. A squeak or dragged pitch means the release occurred too late.

Release versus lift

Release means the chord stops while the fingertips continue touching the strings. Lifting the hand completely wastes motion and usually delays the next chord. The mute is part of the groove, not a correction.

Guitar Exercises - Section VI, Level 50

Module J - sixteen-bar minor capstone

A MINOR AREA | 64 ATTACKS

THE E MAJOR DOMINANT MUST ARRIVE CLEANLY WITHOUT INCREASING PRESSURE

Progression: | Am C G Em | Am Dm E Am | C G Am Em | Dm Am E Am |. The E major chord supplies the raised-third dominant color; prepare its G# finger during the preceding sustain.

ENDING TEST Pass 1 ends on Am. Pass 2 anticipates E on bar 15 and lets Am ring through bar 16.

Guitar Exercises - Section VI, Level 50

Practice progression, clean-change tests, and error diagnosis

MEASURE QUALITY, TIMING, AND TRANSITION ECONOMY

A FAST CHANGE COUNTS ONLY WHEN BOTH CHORDS SOUND AND THE CORRECT BASS STRING IS STRUCK

Ten-phase practice progression

- [ ] 1. Transition taxonomy
- [ ] 2. Silent mechanics
- [ ] 3. Common fingers
- [ ] 4. Guide transfers
- [ ] 5. Release timing
- [ ] 6. Anticipated changes
- [ ] 7. Half-beat bursts
- [ ] 8. One-beat progressions
- [ ] 9. Eight-bar routes
- [ ] 10. Sixteen-bar capstones

Error diagnosis

ANCHOR SQUEEZES
keep contact but reduce pressure

GUIDE SQUEAKS
release before sliding or transferring

LATE BASS
land from bass side; narrow the strum

EARLY RELEASE
hold through the printed count

PUSH IS EARLY
count 4 and before the upstroke

PUSH IS LATE
prepare during beat 4, not after it

BURST COLLAPSES
shorten to one bar and reduce tempo

FORM RESET
say next chord one beat early

Clean-transition tests

Test four pairs at three windows. Count only transitions in which both chord qualities are correct, the attack begins on the proper bass string, and the beat remains steady. Stop the test when quality declines.

Pair	Quarter-note clean/min	Anticipated clean/min	Half-beat burst clean	Primary repair
E <-> Em				Keep fingers 2-3 on A2 and D2; add or lift finger 1 at G1.
D <-> Dm				Keep finger 3 on B3; exchange the high-e quality note.
C <-> Am				Keep finger 1 on B1 and finger 2 on D2; move finger 3 A3 <-> G2.
A <-> Am				Keep finger 2 on D2; reform the G/B-string quality pair.

ADVANCE Add 2 BPM after three clean loops. When two errors occur, return to the previous timing window.

BURST LIMIT Half-beat drills are coordination bursts, not one-minute endurance tests.

Guitar Exercises - Section VI, Level 50

Mastery gate, completion audit, and transition to Level 51

SECTION VI TRANSITION CHECK

THE PLAYER MUST CHANGE CHORDS INSIDE THE BEAT WITHOUT LOSING MUTING, QUALITY, OR COMFORT

Mastery gate before Level 51

- [ ] Identify planted, pivot, guide, and moving fingers before every printed transition.
- [ ] Complete all eighty silent landings with low hover distance and correct attack zones.
- [ ] Play all common/pivot and guide-transfer cells cleanly at quarter-note speed.
- [ ] Execute release-mute cells without lifting the hand from the strings.
- [ ] Place all eight anticipated changes on the and of 4.
- [ ] Complete all six half-beat bursts without losing chord quality.
- [ ] Play six one-beat progressions, four eight-bar routes, and both sixteen-bar capstones.
- [ ] Meet the standard on two separate days without pain or increased fretting pressure.

Next: Level 51 - movable barre-chord families

Level 51 will convert the open E and A chord families into movable major and minor barre chords, develop root-finding on the low E and A strings, separate partial and full barres, and manage pressure and endurance without abandoning the transition mechanics established here.
