Guitar Exercises - Section X, Level 79

Complete-performance improvisation and multi-system integration

SECTION X CAPSTONE | 48-BAR PERFORMANCE

Level 79 combines the advanced systems developed across Section X into one performance problem. The player must shape a long dynamic arc, navigate changing key centers, displace motifs rhythmically, respond to ensemble cues, switch between accompaniment and lead, and recover by ear without abandoning the form.

1. Form outranks detail

Know the bar, section, key center, and role before adding embellishment.

2. Hear the next event

Pre-hear target, cue, or destination before the hand commits to it.

3. Shape the whole take

Dynamics, density, register, and silence must create a beginning, development, peak, and release.

Performance control hierarchy

```
1  PULSE / BAR COUNT
2  SECTION / CUE
3  KEY CENTER / HARMONY
4  ROLE: COMP OR LEAD
5  STRUCTURAL TARGET
6  REGISTER / DENSITY
7  ARTICULATION / ORNAMENT
```

Written workload

Module	Events
A - dynamic arcs	128
B - key centers	144
C - displacement	128
D - cues	96
E - role circuits	160
F - recovery	96
G - section studies	256
H - capstone	192
TOTAL	1,200

Stop rule

If the player loses the form, stop adding lead material immediately. Reduce to roots or guide-tone shells, locate the next section landmark, and resume the intended texture only after the bar count is secure.

The objective is not maximum technique density. A simpler performance that preserves form, cue response, harmony, and musical arc is the higher-level result.

Guitar Exercises - Section X, Level 79

Master 48-bar form map: section, key center, role, and exit cue

7 SECTIONS | 48 BARS

ANNOUNCE THE NEXT SECTION DURING THE FINAL BAR OF THE CURRENT SECTION

Section	Bars	Key center	Harmony	Dyn	Primary role	Exit cue
INTRO	1-4	C major	Cmaj7 | Am7 | Dm7 | G7	p	roots/shells	establish pulse
VERSE A	5-12	C major	Cmaj7 | Am7 | Dm7 | G7 | Cmaj7 | A7 | Dm7 | G7	mp	comp	motif appears
PRE	13-16	C -> G	Am7 | D7 | Gmaj7 | D7	mf	triads	pivot to G
CHORUS	17-24	G major	Gmaj7 | Cmaj7 | Em7 | D7 | Gmaj7 | Cmaj7 | D7 | D7	f	open comp/lead answers	first peak
VERSE B	25-32	G -> A minor	Gmaj7 | Em7 | Am7 | D7 | Cmaj7 | B7 | Em7 | E7	mp	sparse comp	prepare minor
BRIDGE	33-40	A minor	Am7 | Dm7 | E7 | Am7 | Fmaj7 | Bm7b5 | E7 | Am7	mf -> f	guide tones/lead	second peak
FINALE	41-48	A minor -> C/G	Dm7 | G7 | Cmaj7 | A7 | Dm7 | G7 | Cmaj7 | Gmaj7	f -> pp	role mix	resolve and release

Form-recall drill

Without the chart, speak: section name -> bar range -> key center -> first chord -> final chord -> exit cue. Then clap one beat per measure through the entire 48-bar form while speaking only the section entrances.

Guitar Exercises - Section X, Level 79

Module A - long-form dynamic arc and density architecture

8 PASSES | 64 EVENTS

DYNAMICS ARE A FORM SIGNAL, NOT A VOLUME KNOB APPLIED AT RANDOM

Bars	Section	Dynamic	Density	Register	Instruction
1-4	Intro	p	1-2 contacts/bar	low	leave maximum space
5-12	Verse A	mp	4 contacts/bar	low-mid	steady comp; no fills until bar 8
13-16	Pre	mf	4-6 contacts/bar	middle	rise register each bar
17-24	Chorus	f	6-8 contacts/bar	wide	open voicings; short lead answers
25-32	Verse B	mp	2-4 contacts/bar	middle	drop density immediately
33-40	Bridge	mf -> f	4-7 contacts/bar	middle-high	build to second peak
41-44	Finale A	f	6 contacts/bar	high	maintain energy
45-48	Finale B	mf -> pp	4 -> 1	descending	release into final tonic

Pass 1 uses only roots. Pass 2 uses shells. Pass 3 uses the full arrangement. If the dynamic contour disappears when note count is reduced, the arc is not yet internalized.

Guitar Exercises - Section X, Level 79

Module A - register, texture, and silence as performance architecture

8 CELLS | 64 EVENTS

Intro

Register: low roots | E/A strings

Texture: rests after every attack

Verse A

Register: low-mid shells | D/G/B

Texture: short clipped comp

Pre

Register: ascending triads | D/G/B -> G/B/e

Texture: one register step per bar

Chorus

Register: wide | low bass + high triads

Texture: call / answer

Verse B

Register: middle | D/G/B

Texture: leave beat 4 empty

Bridge

Register: middle-high | G/B/e + diagonal lead

Texture: motif development

Finale bars 41-44

Register: high | G/B/e

Texture: peak density

Finale bars 45-48

Register: descending | high -> low

Texture: remove one layer per bar

Silence counts as orchestration. In every four-bar block, leave at least one full beat where the hands are prepared but no note sounds.

Guitar Exercises - Section X, Level 79

Module B - multi-key navigation: structural target map

24 TARGETS | 96 EVENTS

PRE-HEAR THE FIRST STRUCTURAL NOTE OF EVERY KEY-CENTER CHANGE

Context	Chord	Target	Role	Action
C major	Cmaj7	E	3	sing -> one attack -> 2 registers
C major	A7	C#	3	sing -> one attack -> 2 registers
C major	G7	B	3	sing -> one attack -> 2 registers
C -> G	D7	F#	3 of V/G	sing -> one attack -> 2 registers
G major	Gmaj7	B	3	sing -> one attack -> 2 registers
G major	D7	F#	3	sing -> one attack -> 2 registers
G -> Em	B7	D#	3 of V/Em	sing -> one attack -> 2 registers
E minor	Em7	G	b3	sing -> one attack -> 2 registers
E minor -> Am	E7	G#	3 of V/Am	sing -> one attack -> 2 registers
A minor	Am7	C	b3	sing -> one attack -> 2 registers
A minor	E7	G#	3	sing -> one attack -> 2 registers
A minor	Bm7b5	F	b5	sing -> one attack -> 2 registers
A minor -> C	G7	B	3 of V/C	sing -> one attack -> 2 registers
C major	Cmaj7	E	3	sing -> one attack -> 2 registers
C major	A7	C#	3 of V/ii	sing -> one attack -> 2 registers
C major	Dm7	F	b3	sing -> one attack -> 2 registers
C -> G	D7	F#	3	sing -> one attack -> 2 registers
G major	Gmaj7	B	3	sing -> one attack -> 2 registers
Final close	Cmaj7	C	R	sing -> one attack -> 2 registers
Final close	Gmaj7	G	R	sing -> one attack -> 2 registers
Recovery	D7	C	b7	sing -> one attack -> 2 registers
Recovery	E7	D	b7	sing -> one attack -> 2 registers
Recovery	A7	G	b7	sing -> one attack -> 2 registers

The player may not search chromatically for the target. Sing first, silently locate, then make one decisive attack.

Guitar Exercises - Section X, Level 79

Module B - pivot and dominant chains through the performance

6 CHAINS | 48 EVENTS

HEAR THE DESTINATION TONIC BEFORE THE DOMINANT IS PLAYED

C -> G	Am7 -> D7 -> Gmaj7	V1 C -> C -> B V2 E -> F# -> F#
G -> Em	Cmaj7 -> B7 -> Em7	V1 B -> A -> G V2 E -> D# -> E
Em -> Am	Dm7 -> E7 -> Am7	V1 F -> G# -> A V2 C -> D -> C
Am -> C	Dm7 -> G7 -> Cmaj7	V1 F -> F -> E V2 C -> B -> B
C -> Dm tonicize	Cmaj7 -> A7 -> Dm7	V1 E -> C# -> D V2 B -> G -> A
C -> G close	Am7 -> D7 -> Gmaj7	V1 C -> C -> B V2 E -> F# -> F#

First play only the two guide-tone lines. Add roots on the second pass, complete arpeggios on the third, and free phrases only after the key change remains obvious.

Guitar Exercises - Section X, Level 79

Module C - rhythmic displacement inside fixed harmony

8 CELLS | 64 EVENTS

1. Start on beat 1

`C-E-G-B-A-G-E-D`

Chord: Cmaj7 -> next bar unchanged

2. Start on e of 1

`C-E-G-B-A-G-E-D`

Chord: Cmaj7 -> next bar unchanged

3. Start on & of 1

`C-E-G-B-A-G-E-D`

Chord: Cmaj7 -> next bar unchanged

4. Start on a of 1

`C-E-G-B-A-G-E-D`

Chord: Cmaj7 -> next bar unchanged

5. Start on beat 2

`C-E-G-B-A-G-E-D`

Chord: Cmaj7 -> next bar unchanged

6. Start on & of 2

`C-E-G-B-A-G-E-D`

Chord: Cmaj7 -> next bar unchanged

7. Start on beat 4

`C-E-G-B-A-G-E-D`

Chord: Cmaj7 -> next bar unchanged

8. Start on & of 4

`C-E-G-B-A-G-E-D`

Chord: Cmaj7 -> next bar unchanged

Count all sixteenth subdivisions aloud. If the motif causes the player to anticipate or delay the chord change, return to muted-string rhythm only.

Guitar Exercises - Section X, Level 79

Module C - odd-group accents as section-level color

6 STUDIES | 64 EVENTS

USE ODD GROUPINGS AS A TEMPORARY TEXTURE; DO NOT LET THEM REDEFINE THE FORM

Location	Device	Grid	Instruction
Verse A bars 9-10	group of 3	16th grid	accent every 3rd contact
Pre bars 13-14	group of 5	16th grid	accent every 5th contact
Chorus bars 21-22	3+3+2	eighths	accent 1,4,7
Bridge bars 35-36	quintuplet beat	5 per beat	one bar only
Finale bars 43-44	metric displacement	same motif	shift by one 16th
Finale bars 45-48	return to straight	quarters/eighths	remove rhythmic ambiguity

Every odd-rhythm study must be followed immediately by a plain version of the same bars. The plain version confirms that the underlying form and pulse were never lost.

Guitar Exercises - Section X, Level 79

Module D - ensemble cue matrix and response windows

12 CUES | 48 EVENTS

RESPOND TO THE CUE WITHOUT DROPPING THE CURRENT BEAT OR ABANDONING THE ACTIVE CHORD

Cue	Lead time	Required response	Recovery if missed
Head nod	next bar	change section	roots/shells until next landmark
Hand lift	2 beats	prepare held hit	roots/shells until next landmark
Eye contact	next phrase	role handoff	roots/shells until next landmark
Drum fill	end of fill	enter next section	roots/shells until next landmark
Bass walk-up	next bar	raise register	roots/shells until next landmark
Held chord	release cue	stop density; sustain	roots/shells until next landmark
Two-hit figure	immediate	match ensemble hits	roots/shells until next landmark
Count "4"	next bar	new section	roots/shells until next landmark
Unexpected extra bar	one bar	repeat minimal motif	roots/shells until next landmark
Early chorus cue	next bar	skip planned fill	roots/shells until next landmark
Late solo cue	one bar	continue comping	roots/shells until next landmark
Cutoff cue	immediate	mute cleanly	roots/shells until next landmark

Partner randomizes cue order. The player announces the current bar after every response to prove that cue handling did not replace form awareness.

Guitar Exercises - Section X, Level 79

Module D - cue-to-role conversion: comp, lead, hit, or silence

8 CELLS | 48 EVENTS

Visual nod: COMP -> LEAD

finish shell; sing next target; enter high register

Keep current bar count.

Bass walk-up: COMP -> HIGH COMP

move to upper triad on next bar

Keep current bar count.

Visual nod: LEAD -> COMP

resolve by beat 3; reform chord

Keep current bar count.

Count cue: SILENCE -> LEAD

pre-hear beat-one target during count

Keep current bar count.

Drum fill: COMP -> HIT

mute groove; match final ensemble hit

Keep current bar count.

Cutoff: ANY -> SILENCE

release pressure and mute

Keep current bar count.

Held chord: LEAD -> SILENCE

resolve to guide tone; stop adding notes

Keep current bar count.

Extra bar: ANY -> MINIMAL

repeat one root/guide-tone idea only

Keep current bar count.

Role changes become advanced only when they are invisible to the pulse. If the handoff requires a pause, reduce the outgoing phrase earlier.

Guitar Exercises - Section X, Level 79

Module E - four-bar spontaneous role-switch circuits

8 CIRCUITS | 96 EVENTS

ONE HARMONIC LOOP; DIFFERENT ROLE MAP ON EVERY REPETITION

Key	Progression	Role map	Rule
C major	Cmaj7-Am7-Dm7-G7	C C L L	C=comp, L=lead; sing first lead target before entry
C major	Cmaj7-Am7-Dm7-G7	L C C L	C=comp, L=lead; sing first lead target before entry
G major	Gmaj7-Em7-Am7-D7	C L L C	C=comp, L=lead; sing first lead target before entry
G major	Gmaj7-Cmaj7-Em7-D7	L L C C	C=comp, L=lead; sing first lead target before entry
A minor	Am7-Dm7-E7-Am7	C C L C	C=comp, L=lead; sing first lead target before entry
A minor	Bm7b5-E7-Am7-Am7	L C L C	C=comp, L=lead; sing first lead target before entry
C -> G	Am7-D7-Gmaj7-Gmaj7	C L C L	C=comp, L=lead; sing first lead target before entry
Em -> Am	Dm7-E7-Am7-Am7	L C C L	C=comp, L=lead; sing first lead target before entry

Partner may invert the role map after count-in. The chord progression does not change. Player must preserve form and pre-heard targets while changing texture.

Guitar Exercises - Section X, Level 79

Module E - density, register, and role-switch matrix

8 STUDIES | 64 EVENTS

CHANGE ONLY ONE ARRANGEMENT VARIABLE AT A TIME

Study	Outgoing role	Incoming role	Register
Sparse comp -> dense lead	1 shell/bar	5 tones/bar	low -> high
Dense comp -> sparse lead	8th stabs	2 tones/bar	mid -> mid
Low comp -> high lead	roots/shells	4-tone motif	low -> high
High comp -> low lead	triads	bass-register arpeggio	high -> low
Muted comp -> open lead	dead/short	sustained	mid
Open comp -> muted lead	sustain	short targets	mid
Straight comp -> displaced lead	quarters	motif offset by 16th	mid-high
Odd comp -> straight lead	3+3+2	quarter-note targets	mid

After every study, replay it with only the register changed. This isolates whether the listener perceived the role change from density, articulation, or register.

Guitar Exercises - Section X, Level 79

Module F - ear-led recovery hierarchy

12 CARDS | 48 EVENTS

RECOVER TO FUNCTION FIRST; RESTORE COMPLEXITY LATER

Failure	Immediate repair	Next action
Wrong scale note	nearest chord tone	continue pulse
Wrong chord quality	root + third shell	restore quality
Lost target	sing chord 3rd	one decisive attack
Missed cue	current root	wait next landmark
Lost bar count	roots only	locate section cadence
Noisy sweep	single note	resume simpler picking
Failed displacement	straight quarters	restore grid
Missed modulation	destination dominant	confirm new tonic
Lead overruns handoff	stop early	reform comp chord
Comp misses lead cue	single guide tone	begin lead next beat
Unknown extra bar	repeat motif	do not invent harmony

The repair is successful if the listener can still hear where the form is. A technically impressive recovery that moves to the wrong bar is a structural failure.

Guitar Exercises - Section X, Level 79

Module F - randomized recovery and restart suppression

8 SCENARIOS | 48 EVENTS

Verse bar 7: wrong chord

play root on beat 3; correct on next bar

Continue through section exit.

Bridge bar 37: G# missed

play E7 root/third shell; resolve to A

Continue through section exit.

Pre bar 15: missed D7 target

sing F#; land before Gmaj7

Continue through section exit.

Bridge bar 39: lost count

roots only; identify bar 40 Am

Continue through section exit.

Chorus bar 22: pick drops pattern

switch to quarter-note triads

Continue through section exit.

Finale bar 44: displacement fails

return to straight eighths

Continue through section exit.

Verse B bar 30: cue arrives early

skip fill; prepare B7

Continue through section exit.

Final bar: cutoff missed

mute immediately; do not add corrective strum

Continue through section exit.

Record the whole scenario. Score the recovery from the first error until the next section boundary, not from the quality of the isolated repair note.

Guitar Exercises - Section X, Level 79

Module G - section studies: Intro / Verse A / Pre-Chorus

16 BARS | 64 EVENTS

REHEARSE TRANSITIONS AS PART OF THE PHRASE, NOT AS GAPS BETWEEN PHRASES

Bars 1-12 - Intro + Verse A

```
INTRO  | Cmaj7 | Am7 | Dm7 | G7 |

VERSE  | Cmaj7 | Am7 | Dm7 | G7 |
       | Cmaj7 | A7  | Dm7 | G7 |
```

Tasks: p -> mp; roots become shells; introduce one two-note motif in bars 5-8; A7 in bar 10 must contain C#; leave beat 4 of bar 12 empty for the Pre cue.

Bars 13-16 - Pre-Chorus modulation to G

```
| Am7 | D7 | Gmaj7 | D7 |
         C    C    B   F#

         E   F#   F#    C
```

Tasks: raise register each bar; sing F# before D7; land B on Gmaj7; final D7 must sound like a launch into the Chorus rather than a closing cadence.

Loop bar 12 -> 13 and bar 16 -> 17 separately before performing the full 16-bar block.

Guitar Exercises - Section X, Level 79

Module G - section studies: Chorus and Verse B

16 BARS | 64 EVENTS

THE VERSE-B DROP MUST BE IMMEDIATE AFTER THE CHORUS PEAK

Bars 17-24 - Chorus

```
| Gmaj7 | Cmaj7 | Em7 | D7 |
| Gmaj7 | Cmaj7 | D7  | D7 |
```

Role map: bar 17 comp, 18 lead answer, 19 comp, 20 lead answer; repeat with higher register in bars 21-24. Dynamics = f. Use open voicings but keep beat 4 of bar 24 clear.

Bars 25-32 - Verse B / preparation for minor center

```
| Gmaj7 | Em7 | Am7 | D7 |
| Cmaj7 | B7  | Em7 | E7 |
```

Drop immediately to mp and 2-4 contacts per bar. B7 must contain D#; E7 must contain G#. Hear E7 as the dominant that opens the A-minor Bridge.

The dynamic drop is part of the transition. Do not carry chorus density into Verse B simply because the hands are already moving fast.

Guitar Exercises - Section X, Level 79

Module G - section studies: Bridge and Finale

16 BARS | 64 EVENTS

BUILD THE SECOND PEAK, THEN REMOVE ENERGY DELIBERATELY

Bars 33-40 - A-minor Bridge

| Am7 | Dm7 | E7 | Am7 |

| Fmaj7 | Bm7b5 | E7 | Am7 |

Develop one motif across bars 33-36. Bars 37-40 use guide-tone targets: F over Bm7b5, G# over E7, C/A over Am7. Build from mf to f.

Bars 41-48 - Finale and release

| Dm7 | G7 | Cmaj7 | A7 |

| Dm7 | G7 | Cmaj7 | Gmaj7 |

Bars 41-44 stay high and energetic. Bar 44 may use one displaced motif. Bars 45-48 remove one layer per bar: fewer contacts, lower register, softer dynamics, longer note values.

The final Gmaj7 is allowed to sound like a quiet afterimage rather than a new modulation. Sustain; do not restart the form.

Guitar Exercises - Section X, Level 79

Module H - 48-bar complete-performance capstone

48 BARS | 192 EVENTS

ONE COUNT-IN, ONE TAKE, NO RESTARTS

Bars	Section	Key	Primary task	Required event
1-4	INTRO	C major	establish pulse	one full-beat rest
5-12	VERSE A	C major	motif + comp	A7 third C#
13-16	PRE	C -> G	modulate to G	D7 third F#
17-24	CHORUS	G major	role answers / peak	two role handoffs
25-32	VERSE B	G -> A minor	density drop / prepare minor	B7 D# + E7 G#
33-40	BRIDGE	A minor	ear-led targets / second peak	Bm7b5 F + E7 G#

Pass 1: roots only. Pass 2: accompaniment only. Pass 3: printed role map. Pass 4: partner randomizes three role cues. Pass 5: free orchestration while preserving all harmonic targets and section dynamics.

Guitar Exercises - Section X, Level 79

Capstone scoring, failure classification, and repair plan

18-POINT RUBRIC | TARGET >= 16

SCORE THE COMPLETE TAKE, NOT THE BEST ISOLATED MOMENTS

Category	Scoring
Pulse / time	0 lost | 1 recoverable | 2 stable
Form / bar count	0 lost | 1 one error | 2 secure
Key-center navigation	0 unclear | 1 partial | 2 audible
Chord-function targets	0 missed | 1 mixed | 2 clear
Rhythmic displacement	0 breaks form | 1 unstable | 2 controlled
Cue response	0 missed | 1 late | 2 immediate
Role switching	0 interrupts | 1 functional | 2 musical
Dynamic / register arc	0 flat | 1 partial | 2 shaped
	form

Passing standard

16 / 18 or better on two separate days. No zero in pulse, form, cue response, or recovery.

Repair rule

Practice the two-bar boundary around the failure first. Do not rerun all 48 bars to repair one transition.

Guitar Exercises - Section X, Level 79

Section X completion gate and next-stage integration map

SECTION X COMPLETE WHEN PERFORMANCE IS REPEATABLE

ADVANCED INTEGRATION MEANS SYSTEMS SURVIVE CONTACT WITH A COMPLETE PERFORMANCE

Section X mastery gate

- [ ] Recall 48-bar form from memory
- [ ] Pre-hear all modulation targets
- [ ] Execute one clean displaced motif
- [ ] Respond to 3 randomized cues
- [ ] Switch comp <-> lead without pause
- [ ] Recover from one planted error
- [ ] Shape both dynamic peaks
- [ ] Complete final decrescendo/release
- [ ] Record two passing takes

Performance debrief

Best section: _____

Weakest boundary: _____

Lost target: _____

Cue response issue: _____

Rhythm issue: _____

Role-switch issue: _____

Recovery used: _____

One repair for next take: _____

What Section X has added

The player can now analyze and reconstruct repertoire, hear functional harmony, pre-hear guide tones, navigate modulations, use odd rhythmic groupings without losing the barline, respond to ensemble cues, switch accompaniment and lead roles, and preserve a complete performance through errors.

This is the point where future material should become less like isolated vocabulary acquisition and more like specialization: repertoire, genre-specific articulation, advanced chord melody, composition, arrangement, sight reading, or higher-speed mechanics can now be layered onto an integrated musical system.

Next level

Level 80 begins a new advanced specialization block with chord melody and independent-voice control: melody on top, inner guide tones, bass movement, chord substitution, and simultaneous accompaniment/lead execution.
